CNC & VMC Machine Calibrator

QC20-W wireless ballbar system

The QC20-W ballbar contains a precision linear transducer of Renishaw's own design (patent applied for). It is used to measure variations in radius as the ballbar is rotated around a fixed point. This data is used to calculate overall measures of contouring performance (circularity, circular deviation) of CNC machine tools.

XL-80 laser system

Laser interferometry, the globally recognised approach for machine calibration, offers the ultimate in accuracy. The XL-80 laser system provides versatile, traceable measurement for machine tools, co-ordinate measuring machines (CMMs), motion systems and scientific applications.
